Kestrel Grid Services - Vendor Due Diligence Summary

Prepared for the investment committee - 14 October 2026 - Confidential

1. Business overview

Kestrel Grid Services owns and operates 3 regional electricity substations and 410 km of medium-voltage distribution lines under a regulated 20-year concession (to 2041). About 88% of revenue is regulated; the rest comes from connection fees.

2. Key figures (FY2025, audited)

Revenue: USD 84.2m (FY2024: USD 79.5m)
EBITDA: USD 21.7m, a 25.8% margin
Net debt: USD 63.0m (2.9x EBITDA)
Capex: USD 12.4m, mostly the Brookfield substation upgrade

3. Main risks

- The regulator's 2027 rate review could cut the allowed return by up to 0.5 points.
- The Brookfield upgrade is 4 months late; a further delay would defer USD 3.1m of revenue.
- 62% of debt refinances in 2028.

FICTIONAL SAMPLE DOCUMENT - all companies, people and figures are invented for a software demo.

Appendix - data room notes

Data room index reviewed on 10 October 2026. Management accounts for Q3 2026 are still outstanding. Notes copied from the data room tool follow.
