Investment Committee memo

Ironbridge Digital Partners - proposed follow-on investment for Paris Campus V

Company code CO-004 · Data centers (hyperscale) · Paris, France · Prepared by the digital infrastructure deal team · 20 October 2026 · Confidential

1. Recommendation

We recommend approving a follow-on equity investment of up to **USD 310.0m** to fund a 60 MW fifth campus in Paris (total cost about USD 600m, 55% equity-funded), pre-let at 70% to an existing hyperscale tenant. The investment would be made pro rata to our 92.6% stake. This smaller, pre-let-only scheme replaces the follow-on of USD 796.7m with Tucker Infrastructure Fund, which was terminated on 31 May 2025 after the co-investor withdrew.

2. Background

We acquired 92.6% of Ironbridge on 17 May 2022 for USD 4,197.0m from Robinson Capital. The company operates 4 data center campuses in Paris with 324.6 MW of recorded IT capacity and a combined book value of USD 3,726.1m.

Campus	Capacity	In service since	Book value
Paris Data center campus	not recorded	13 November 2022	USD 1,498.5m
Paris Data center campus II	66.1 MW	15 January 2015	USD 452.4m
Paris Data center campus III	133.0 MW	6 April 2017	USD 784.3m
Paris Data center campus IIII	125.5 MW	18 April 2022	USD 990.9m

3. Financial performance

Fiscal year	Revenue	EBITDA	EBITDA margin	Net debt	Capex
FY2023	USD 637.3m	USD 339.9m	53.3%	USD 1,533.1m	USD 393.3m
FY2024	USD 732.8m	USD 372.3m	50.8%	USD 1,814.5m	USD 280.1m
FY2025	USD 842.7m	USD 433.7m	51.5%	USD 2,234.7m	USD 417.9m

Revenue for the first nine months of 2026 was USD 700.91m, +4.9% versus the budget of USD 668.05m and +12.7% on the same period of 2025. All three 2026 quarters beat their revenue target.

4. Investment thesis

- Paris hyperscale vacancy is low and the anchor tenant has asked for 40 MW of additional capacity by 2028.
- A pre-let of 70% before construction limits leasing risk; the remaining 30% targets existing customers.
- The site has a grid connection agreement for 75 MW, removing the main bottleneck for new capacity in the region.
- Base-case unlevered return of 9.5-10.5% (deal team model, not audited).

5. Key risks

- **Leverage.** FY2025 net debt of USD 2,234.7m is 5.2x FY2025 EBITDA of USD 433.7m, up from USD 1,814.5m at the end of FY2024. The follow-on must be equity-funded; no new debt is proposed until leverage falls.
- **Margin.** The EBITDA margin was 51.5% in FY2025 (FY2023: 53.3%), in line with hyperscale peers (roughly 45-55%), but power costs are passed through to tenants only with a lag, so a price spike would compress it.
- **Construction.** Cost overruns on electrical equipment of 10-15% are possible; the budget holds an 8% contingency.
- **Execution history.** The 2025 follow-on fell through; a second failure would damage tenant confidence.

6. Data gaps

Capacity is not recorded for: Paris Data center campus. The deal team has asked management to confirm it before final approval.

7. Decision requested

Approval of a follow-on equity commitment of up to USD 310.0m, subject to a signed pre-let agreement and confirmatory technical due diligence.
